

COMMUNITY HEALTHCARE SERVICES

AT INTERSERVE HEALTHCARE WE WORK EXTENSIVELY WITH CCGS, NHS TRUSTS AND PHARMACEUTICAL SUPPLIERS TO DELIVER HIGH QUALITY CARE AT HOME SERVICES.

- High quality, reliable care at home delivered by our skilled and nurse-led workforce
- Nurses and client care staff deliver over 20,000 episodes of care each month
- A mobile enabled workforce available across England, Scotland and Wales
- We prioritise high quality, safe care through robust governance and on-going supervision and training
- We work in partnership with pharmaceutical companies and NHS Trusts to deliver innovative care solutions in the community

Thanks to our extensive workforce, Interserve Healthcare works in partnership with pharmaceutical companies and NHS centres of expertise to deliver life-saving medication and procedures in the patient's home. This reduces the need for hospital admissions, the burden on NHS staff time and significantly improves the experience for the patient.

Talk to us about the growth of our renal dialysis and IV home therapies services where we have achieved 20% increase in activity for a client we have a national partnership with. We have also seen around 50% growth with the same client for IV services carried out by our community nurses.

In another initiative, Interserve Healthcare nurses step in after patients have been discharged from the only UK hospital which can treat their niche condition. Through our pool of nationwide nurses, we supervise home injections, which has reduced the need for re-admissions among these patients.
